FALL PLANTING

FALL Planting is becoming more and more practiced, and while early Spring is an excellent time for transplanting, much can be said in favor of planting in the late Summer or Autumn. Trees and Plants of questionable hardiness should not be transplanted in the Fall, and such varieties we have omitted from the following lists, but the greater number of sorts offered, if set out in the Fall, unquestionably thrive better than would Spring-planted stock. In the Fall, up to the last of November, the ground is just moist and warm enough to cause a transplanted Tree or Plant to at once start a root-growth, and naturally such a Plant will be in a better condition to withstand the drying winds and hot sun of the following Summer than would a plant which has been disturbed in the Spring, and particularly if it was transplanted late in the Spring, when it at once will begin sending out leaves, while in the Fall the roots only will act.

Evergreen Trees and Shrubs can be safely transplanted at any time after August first when they have finished their growth for the Summer, and the danger of drying out before the plant becomes established is comparatively slight, as rains usually are frequent at that time of the year, and conditions most favorable for an immediate root-growth, causing the plant to become well established before severe cold weather sets in.

Herbaceous Perennials are usually in condition to be moved by September first, and can be safely transplanted at any time up to the last of November.

Deciduous Trees, Shrubs and Vines, including Roses, Hedge Plants and Fruit Trees have finished their growth by the middle to the last of September, after which time they can be transplanted with the greatest degree of safety up to the time of heavy frosts.

Fumigation and Inspection.—Our Nurseries are inspected twice each year by the State Entomologist, and are kept absolutely free from all insects and pests.

Conditions of Sale.—While it must be obvious that it is to our best interest to send out stock which will not only grow, but prove true to name and description, and although we use all care and precaution possible, we give no warranty, express or implied, of any trees, shrubs, plants, bulbs or seeds we sell, and we will not in any way be responsible as to the description, quality productiveness, crop or otherwise. If the purchaser does not accept the goods under these conditions, they must be at once returned.

Terms.—Cash with order or a satisfactory reference from strangers.

Those having an established rating need not send reference.

Remittances should be made by Post Office Money Order, Drafts on Boston or New York Banks, or Express Money Orders. Postage stamps will be found a convenient method of remitting for small amounts and can be used by us to advantage.

A discount of 5 per cent is allowed when cash accompanies order.

NOTE.—All Claims, Shortages or Errors must be reported within five days after receipt of goods.

Prices.—The prices given in this catalogue, we believe, represent a fair value for such high grade stock as we always endeavor to supply.

Location of our Nurseries.—Located 15 miles from Boston, 12 miles from Lowell, 3 miles from Concord, and 5 miles from Lexington, our nurseries can be reached via Boston & Maine trains from the North Station, Boston, or via electric cars from Arlington Heights. The cars connecting Arlington Heights and Concord pass directly through our property.

Visitors are always cordially welcome, but we ask the indulgence of parties calling during our busy Spring and Fall months, when it is quite impossible for us to devote as much time as we should wish in showing our nurseries. The most courteous treatment possible, however, will always be given to those who favor us by calling.

IN THIS CATALOGUE

WE NAME ONLY SUCH VARIETIES OF TREES, SHRUBS AND PLANTS WHICH ARE SUFFICIENTLY HARDY TO BE SAFELY TRANSPLANTED IN THE FALL. FOR VARIETIES NOT NAMED HERE, AND FOR MORE EXHAUSTIVE DESCRIPTIONS, SEE OUR GENERAL CATALOGUE.

RELIABLY HARDY EVERGREEN TREES

Evergreen trees should be planted extensively, as they are equally attractive at all seasons. In winter they afford a shelter from the wind better than do deciduous trees, for which reason they are much appreciated by the birds, who also feed upon the seeds of many varieties.

We ship no Evergreens which have not been transplanted several times. An Evergreen which has not been transplanted is often a finer specimen than transplanted stock but it is of little value to the buyer. The larger sizes are shipped with compact balls of roots wrapped in burlap. This method insures the plants against loss.

Abbreviations denoting size at maturity: "L," large; "M," medium; "S," small; "D," dwarf; "VD," very dwarf. Rapidity of growth: "r," rapid; "m," medium; "s," slow.

FAN-TRAINED FRUIT TREES

These are excellent for covering walls, trellises, etc., and produce the most perfect fruit. The trees we offer are imported from Northern Europe and are of the most hardy. They are grafted on dwarf stock, and can be relied upon to bear fruit the second season after planting.

Of Apples and Pears we offer in fan-trained trees all the leading American varieties and also the wonderful old English Hawthornden Apple, and the Count Moltke Pear, which is undoubtedly the most delicious of all Pears.

PRICES

Fan-trained Apples, 5 to 6 feet, each \$3.50.

Fan-trained Pears, 5 to 6 feet, each \$3.50.

PYRAMID-TRAINED APPLES AND PEARS

These trees are imported from Northern Europe also. They are dwarfed and of bearing sizes, and very stocky. They can be furnished in all leading varieties. Where the quickest possible results are desired, these should be planted in preference to native dwarf trees.

Our Stock of Trees and Plants, which are grown under severe climatic conditions, we confidently recommend as the hardiest and best obtainable. Winters start here about December 15, and generally end by March 15. The lowest record of recent years was reached in January, 1914, when the thermometer registered 32 degrees below zero. Our usual record is 22-25 below, and it is safe to say that "Bedford grown trees and plants will live and thrive everywhere."

While we give our best efforts to produce and furnish high grade trees and plants, and do not attempt to pose as landscape architects, we are always happy to give such assistance as we can to customers in making the proper selection of what to plant, and advice as to the care of plants, and we respectfully invite correspondence pertaining to problems of interest to planters.

ANNOUNCEMENT

In response to many inquiries, we have published a pamphlet on "Practical Methods of Attracting Wild Birds," by Mrs. George H. Mellen, of Newton. Price in paper cover, 25 cents; board cover, 35 cents. Prof. C. J. Maynard, the well-known ornithologist, says of Mrs. Mellen's success: "I have been very much interested in your account of your birds. I think it very remarkable that you are able to attract so many birds in such a settled section of the city."

PACKARD BIRD-HOUSES

Designed by Mr. Winthrop Packard, the Secretary-Treasurer of the Massachusetts Audubon Society. These houses are round, soft gray in color, unobtrusive, made of fibre, very light yet will stand drenching rains and heavy gales, are well ventilated, easily cleaned and put up—and the birds love them. Moreover, they are inexpensive, 35 cents each or three for \$1.00. Made in two sizes, the smaller for chickadees and little birds, and the larger for bluebirds, downy woodpeckers and tree swallows.

NOTE:—We have discontinued carrying in stock all Bird Houses, excepting those made by Mr. Packard.

NOTE:—At the prices given in this catalogue, we will guarantee to furnish strictly first class stock of the sizes and ages named, but as our prices are low, and as it is impossible for us to guarantee the life of a plant after it leaves our hands, we can not replace free stock which may fail to grow. If a guarantee for one year is desired, add 20 per cent. to the catalog price.
